

Scaling down (cliffs) to scale up to the challenge: the Shiant Isles Seabird Recovery Project LIFE13/NAT/UK/000209

Talk Structure

1. Shiant Isles
2. *Rattus rattus* eradication – set up, operation
3. Best practice highlights
4. Summary

J Tayton

J Tayton

Shiants Location

Garbh Eilean (Rough Island)

Eilean Mhuire (Mary Island)

Galtachan

Eilean an Taighe (House Island)

Image from: Historic Environment Scotland

What makes the islands special

- SPA designation for auk species
 - 63k pairs of puffins
- SSSI designation for:
 - seabird assemblage
 - geology

Eradication Preparations

- Volunteer involvement – bait stations
- Permissions, licences
- WMIL eradication pre-assessment
- Rodenticide (bromadiolone) resistance testing

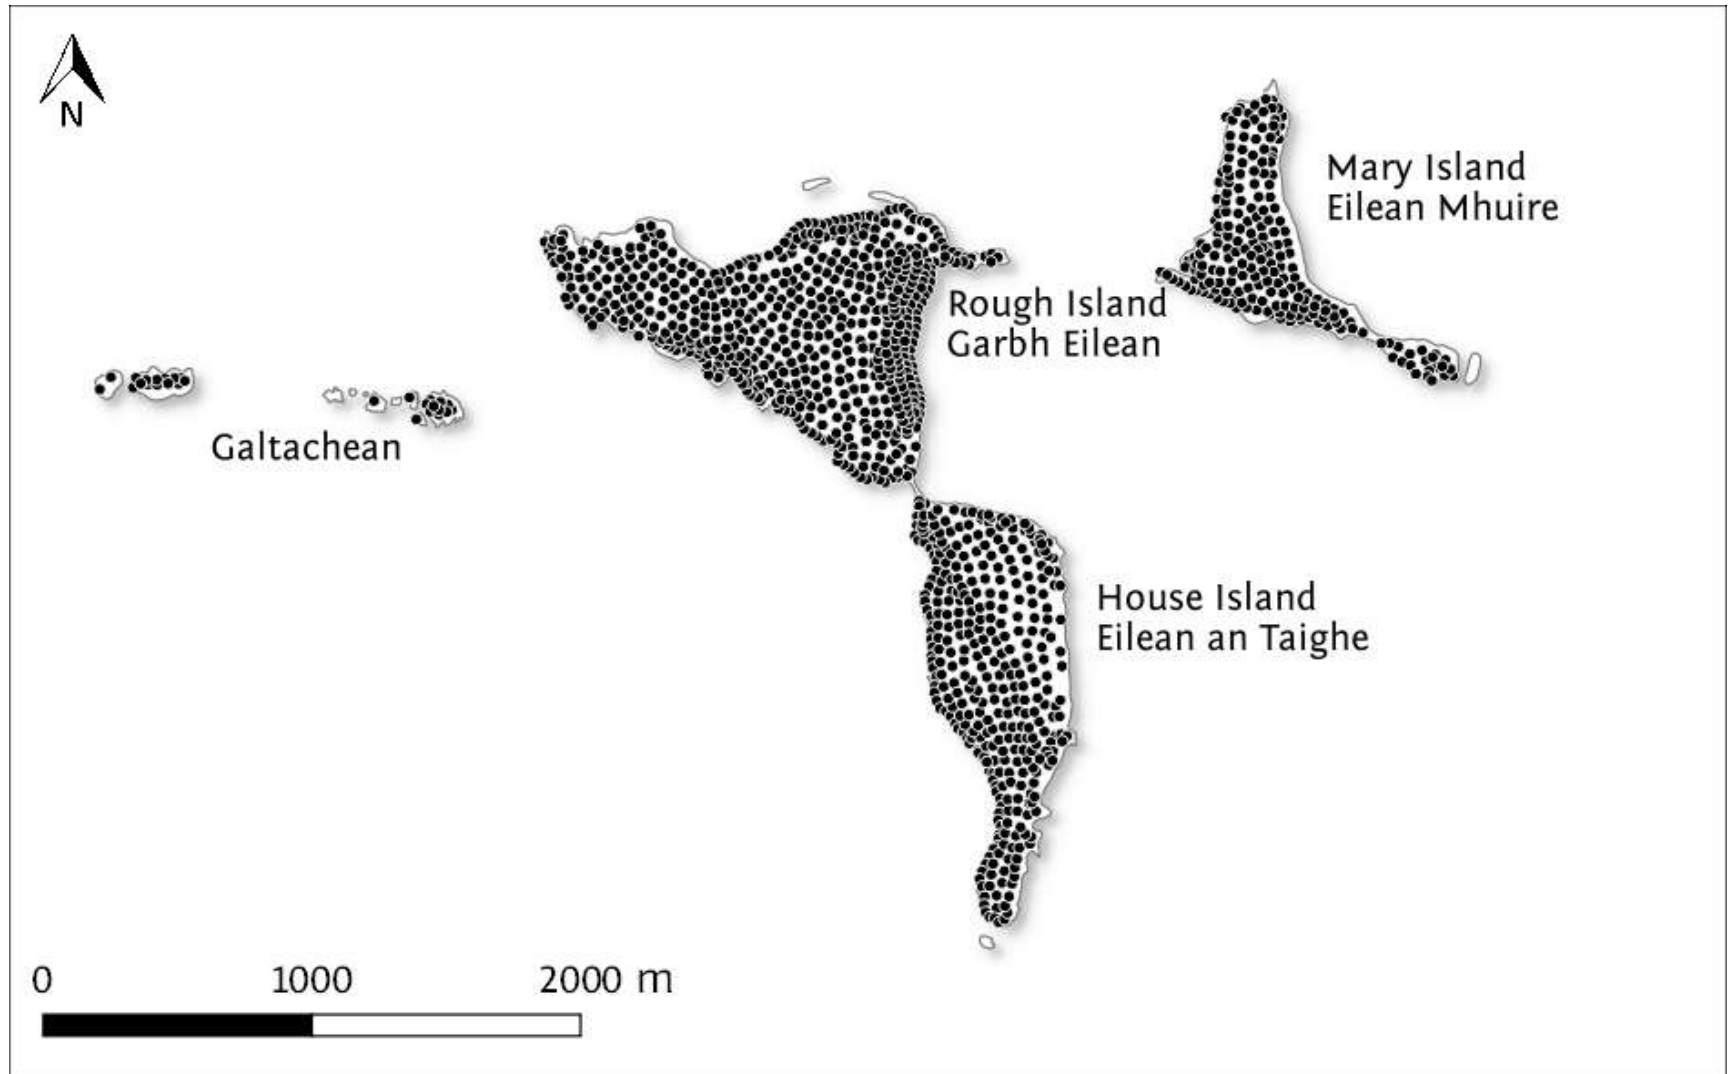

Monitoring of target and non-target species and vegetation

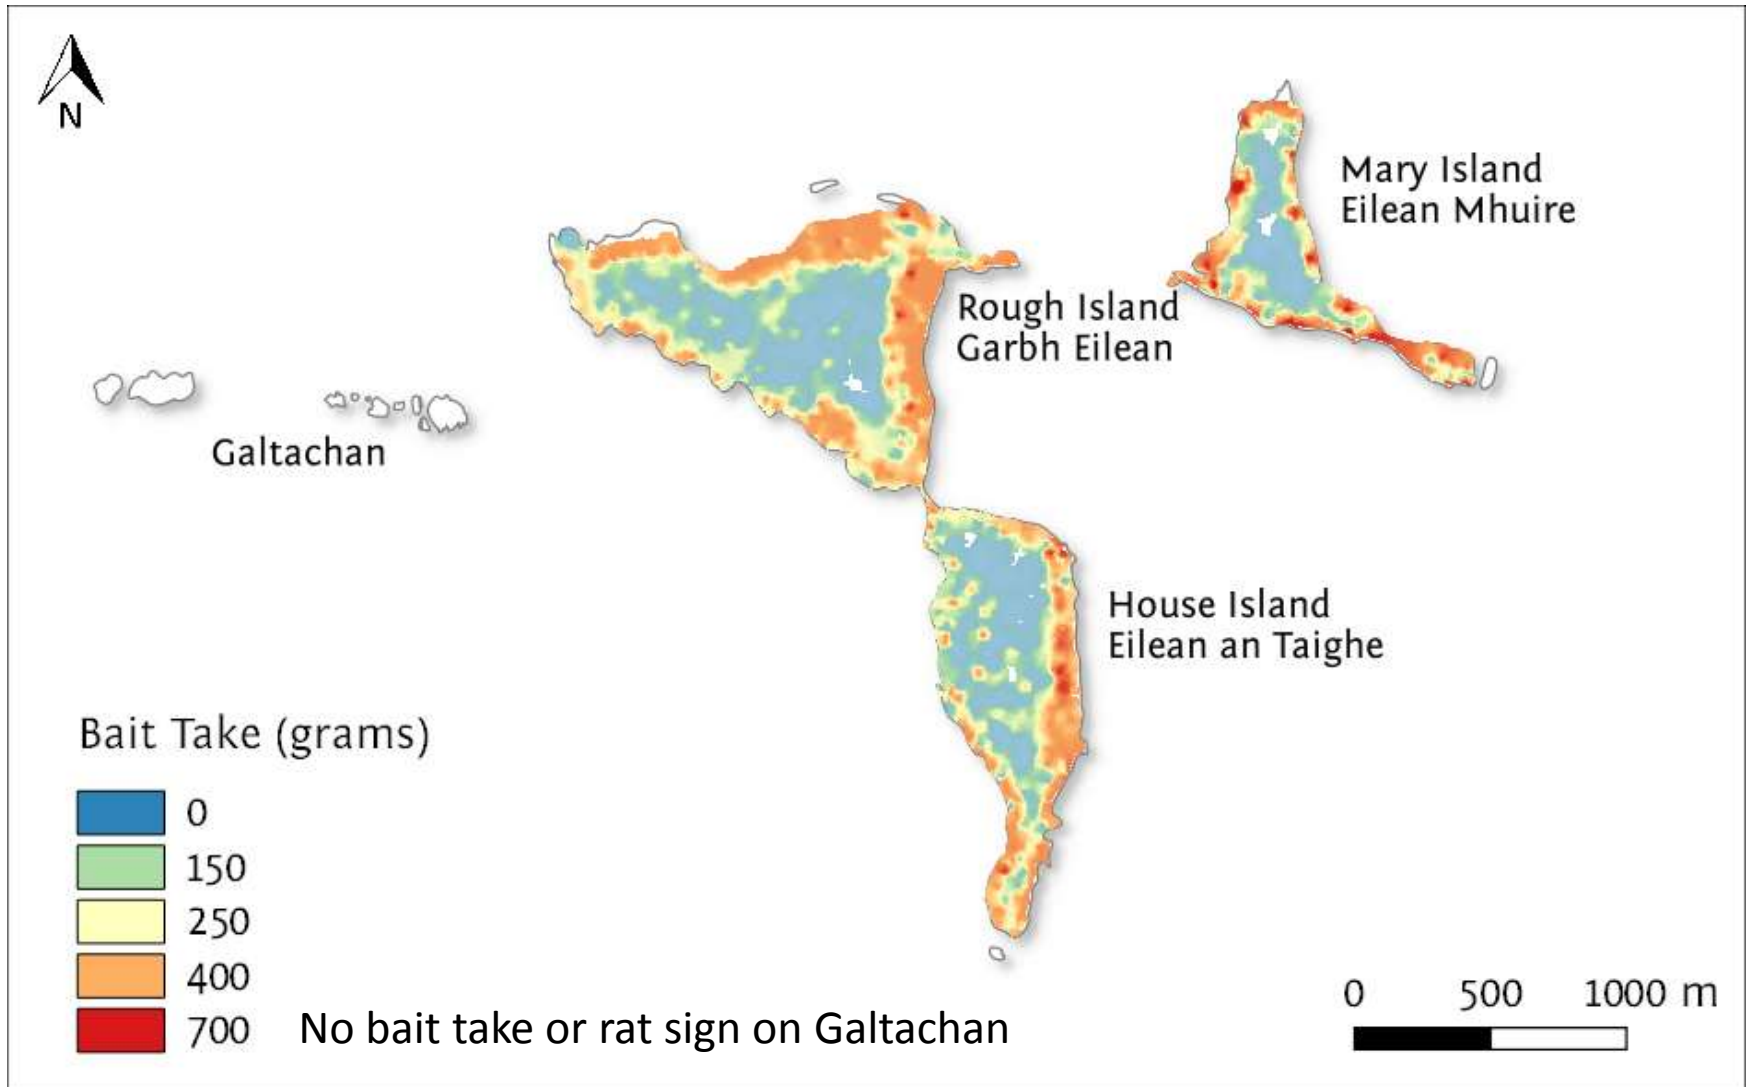

Remote rope access training

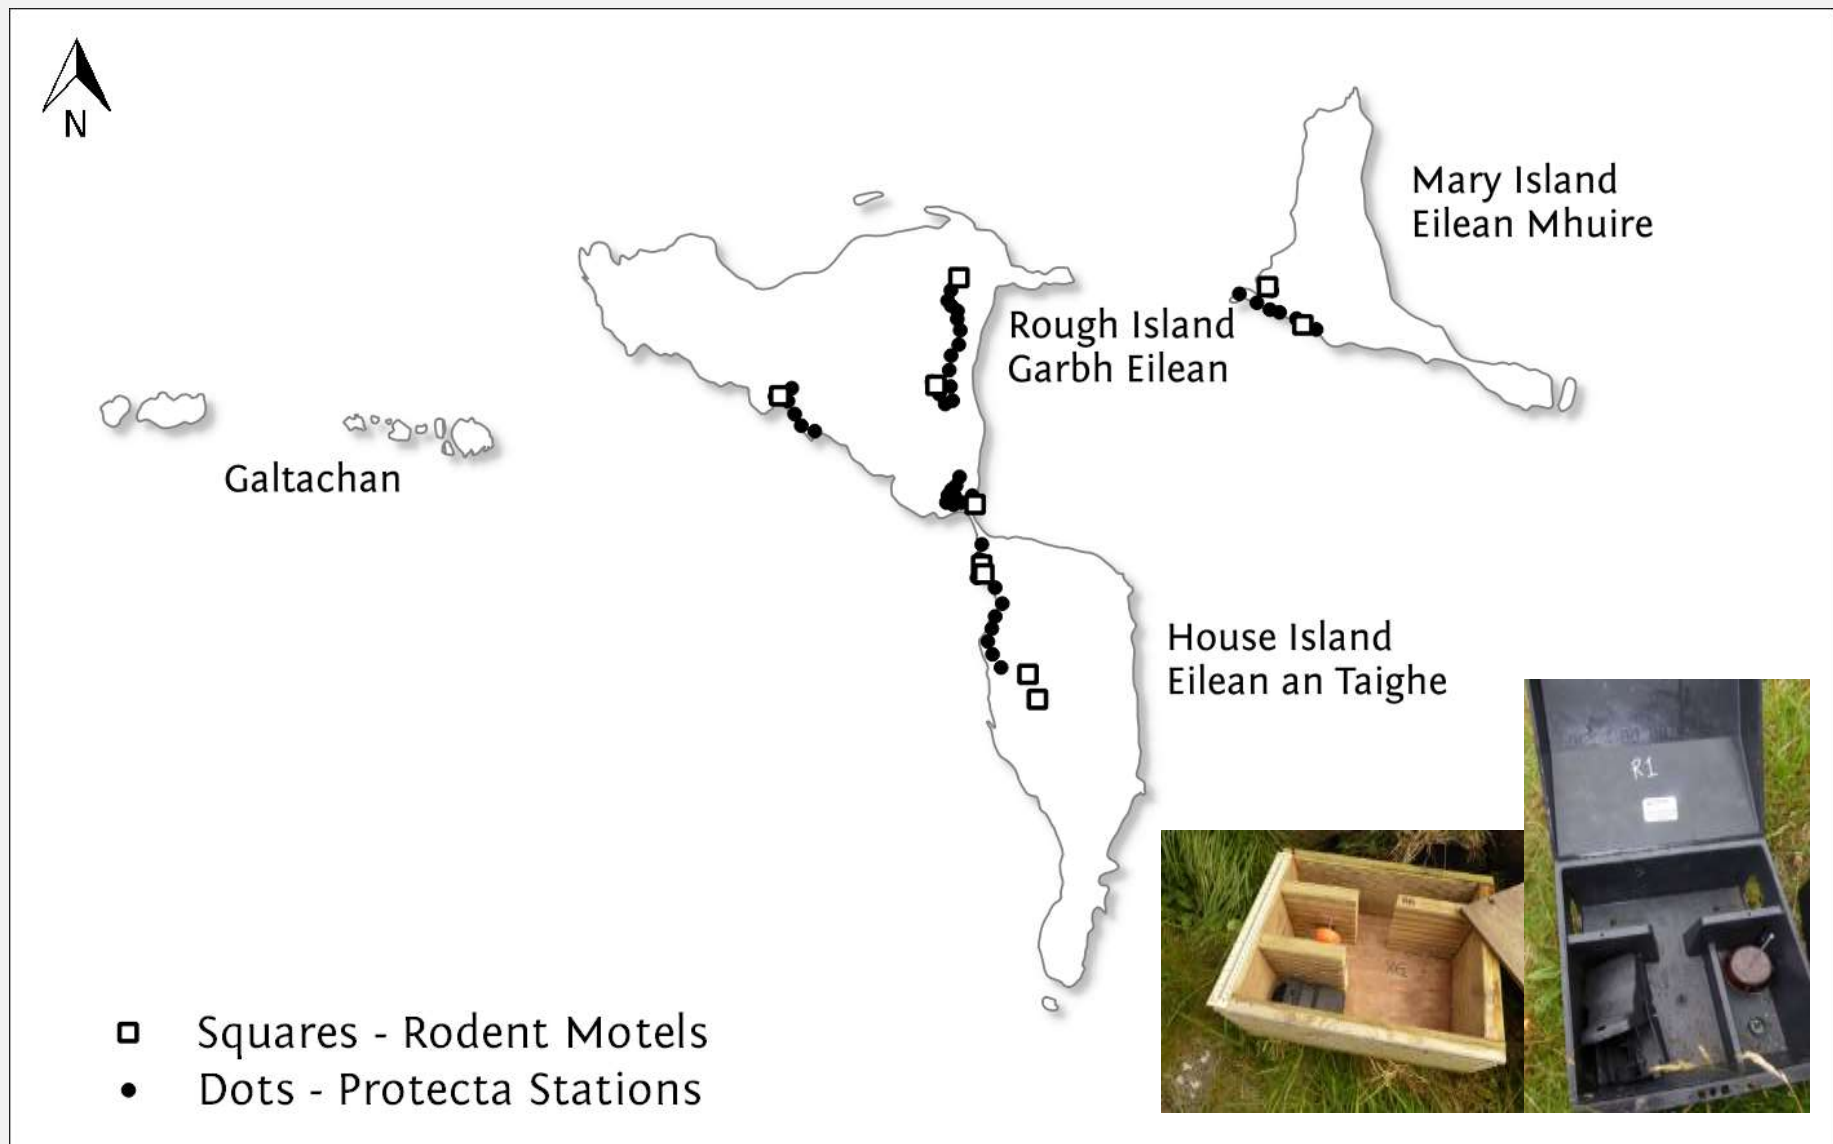

Bait station grid

Results – bait take

Currently: monitoring stations

Best Practice Highlights

- Field experts WMIL contracted to lead pre-assessment and eradication
- Rodenticide resistance testing at Reading Uni
- Scrutiny by SNH: to apply rodenticide at SPA
- Rope access training, equipment and systems

Summary

- Eradication campaign appears successful
 - Declaration of rat free status March 2018 at earliest
- Best practice followed for all key elements
 - Well established methods
 - Rodenticide resistance testing
 - Safe, well equipped team
- Enhanced UK capacity for eradications
